

ABSTRACT OF THE DISCLOSURE

[0035] Embodiments of the present invention relate to systems and methods for network element fault information processing. In an embodiment, a network element identifier and a network element fault information processing instruction are received. A query for network element fault information based at least in part on the network element identifier is sent. Network element fault information is received. The network element fault information is processed based at least in part on the received network element fault information. The processed network element fault information is output.
